Introduction :

This Mini project aims to create an easy-to-use platform that helps residents and administrators to handle daily tasks. The system will allow Residents to pay bills, receive important notifications, reserve shared facilities and file complaints about facilities. The goal is to streamline communication and operations within the society using one digital platform.

This digital solution removes the need for manual record-keeping and face-to-face communication by offering an online solution for every Resident and Administrator. It ensures transparency in payments, provides timely updates about important announcements, and gives easy access to shared facilities. By digitizing these operations, the system saves time and improves the overall efficiency of Society Day-to-Day Functioning. Ultimately, it creates a smart and organized living environment for the residents.

Project Scope :

Introduction:

ResiPortal is a web-based residential management system designed to simplify and automate the daily activities of housing societies. It provides a centralized platform for residents and administrators to manage facility bookings, maintenance payments, and basic society operations efficiently. The system aims to reduce manual work, improve transparency, and ensure smooth communication within the residential community.
